Preface

A concrete structure, either plain or reinforced, is unique among the many systems of modern construction. It is the only type of structure that is manufactured from its component materials (*i.e.* cement, aggregate and water) on the site of the work. Proper reinforced concrete construction depends upon men—men who understand the action of structures, men who know the characteristics and the limitations of the material that they are handling, and men who are conscientious and determined to conduct their work with honour to themselves and with credit to their profession.

The present text book, in its two volumes, presents modern methods of design both for ordinary as well as prestressed concrete structures. Volume I has 19 Chapters and deals with more common and elementary structures. The present volume, in its 12 Chapters, deals with more advanced topics. Chapter 1 deals with beams curved in plan that are mostly used for water tanks discussed in Chapter 2. Elementary water tanks have already been dealt with in volume I. Chapter 3 deals with reinforced concrete pipes, mostly used for water supply. Chapter 4 covers the design of bunkers and silos while Chapter 5 deals with tall chimneys of reinforced concrete. Chapters 6 and 7 deal with portal frames and building frames respectively. Design of aqueducts and box culverts have been given in Chapter 8. More common types of concrete bridges—such as deck slab bridges, T-beam bridges and balanced cantilever bridges have been given in Chapter 9, Chapter 10 deals with the ultimate load design while Chapter 11 deals with the principles and design methods for prestressed concrete. Lastly, Chapter 12 deals with the stresses induced due to shrinkage and creep of concrete.

Each chapter begins with clear statements of pertinent definitions, design principles and theories, and the design procedures. The basic principles are supplemented with numerous design examples and illustrations, along with detailed drawings.

Various designs are based on latest Indian Standards. The tables or curves giving permissible stresses and/or design coefficients, as well as the basic rules for design, taken from the various Indian Standards are gratefully acknowledged. In spite of every care taken to check the numerical work, some errors may remain, and I shall be obliged for any intimation of these readers may discover.

B.C. PUNMIA

Preface to the Second Edition

In the Second Edition, the subject matter has been thoroughly updated and the revised Indian Standard Codes IS : 456-1978 and IS : 1343-1980 have been introduced. Both these Codes differ from their earlier versions in two aspects : (1) Some design procedures have been basically changed and (2) the Codes use SI units. The Second Edition incorporates both these aspects. However, since the change over from the MKS to SI units has to be gradual, and since the revised Codes have yet not been included in the teaching curriculum of all the Institutions, the design procedures based on earlier versions of the Codes have been retained. The design procedures laid down in the Revised Codes have been given at the end of each chapter and the illustrative examples, using these new procedures have been solved in SI units. Limit State Design has been introduced in chapter 10 as well as in Chapter 11 on prestressed concrete. It is hoped the readers will find the book useful in interpreting the provisions of the new Codes. Further suggestions will be greatly appreciated.

Jodhpur

1st January 1983.

B.C. PUNMIA

Preface to the Third Edition

In the Third Edition of the book, the subject matter has been thoroughly revised and rewritten in SI units. Revised Indian Standard Codes IS : 456-1978 and IS 1343-1980 have been extensively used. Majority of the diagrams have been redrawn. The chapter on Limit State Design has been separated from the chapter on Ultimate Load Design. A new chapter on the 'Yield Line Theory and Design of Slabs' has been introduced at the end. With these changes, it is hoped, the book will be more useful to the students as well as practicing Engineers.

Jodhpur

1st March 1987

B.C. PUNMIA

Preface to the Fourth Edition

In the fourth edition of the book, the subject matter has been thoroughly revised and updated. Seven new chapter have been added on the Limit State Design. With the addition of the new chapters the reader will be better equipped with the latest design methods. It is hoped, the book will be equally useful to the practicing Engineers.

Preface to the Fifth Edition

In the Fifth Edition, the book has been thoroughly revised, enlarged and updated. The number of chapters have been increased from 20 to 27. The book has been divided into six parts. *Part 1*, containing 5 chapters, is on *Water Tanks*. *Part 2* is on *Pipes, Silos and Chimneys* and contains 3 chapters. *Part 3* on *Concrete Frames* has 2 chapters. *Part 4* is devoted to *Concrete Bridges* and has 2 chapters. *Part 5*, containing 13 chapters, is on *Limit State Design*. Lastly, *Part 6*, having 2 chapters is on *Prestressed Concrete and Miscellaneous Topics*. A large portion of the book is now devoted to the limit state design. Due to these additions and updation, the number of the pages in the book have been increased from 1005 to 1144. It is hoped, with these changes, the New Edition will be more useful to both the students as well as Field Engineers.

Contents

PART I WATER TANKS

| CHAPTER 1. BEAMS CURVED IN PLAN | | Page |
|--|--|-------------|
| 1.1. | Introduction : Torsional moments in beams ... | 1 |
| 1.2. | Circular beam supported symmetrically ... | 4 |
| 1.3. | Semicircular beam simply supported on three equally spaced columns ... | 11 |
| 1.4. | Curved beam simply supported at ends and continuous over two equally spaced intermediate supports ... | 17 |
| 1.5. | Curved beam fixed at ends ... | 20 |
| 1.6. | Semi-circular beam with slab ... | 26 |
| 1.7. | Torsion factor ... | 29 |
| 1.8. | Stresses due to torsion in concrete beams ... | 33 |
| 1.9. | Indian standard Code for design for torsion (IS : 456-1978) ... | 42 |
| | Problems ... | 56 |
| CHAPTER 2. DOMES | | |
| 2.1. | Introduction ... | 57 |
| 2.2. | Nature of stresses in spherical domes ... | 57 |
| 2.3. | Analysis of spherical domes ... | 59 |
| 2.4. | Stresses due to wind load ... | 65 |
| 2.5. | Design of R.C. domes ... | 65 |
| 2.6. | Conical domes ... | 72 |
| | Problems ... | 76 |
| CHAPTER 3. CIRCULAR AND INTZE TANKS | | |
| 3.1. | Introduction ... | 77 |
| 3.2. | General design requirements according to Indian Standard Code of Practice (IS : 3370, Part II, 1965) ... | 78 |
| 3.3. | Joints in water tanks ... | 83 |
| 3.4. | Circular tank with rigid joint between floor and wall ... | 86 |
| 3.5. | I.S. Code method and other methods for cylindrical tanks ... | 95 |
| 3.6. | Design of flat base slab for elevated circular tanks ... | 126 |

| | | | |
|-------------------------------------|--|-----|-----|
| 3.7. | Circular tank with domed bottom and roof | ... | 139 |
| 3.8. | Intze tank | ... | 160 |
| 3.9. | Effects of continuity | ... | 166 |
| 3.10. | Design of tank supporting towers | ... | 166 |
| 3.11. | Design of foundations | ... | 180 |
| | Problems | ... | 230 |
| CHAPTER 4. RECTANGULAR TANKS | | | |
| 4.1 | Introduction | ... | 231 |
| 4.2 | Approximate method | ... | 232 |
| 4.3. | Exact method | ... | 241 |
| | Problems | ... | 260 |
| CHAPTER 5. UNDERGROUND TANKS | | | |
| 5.1. | Introduction | ... | 261 |
| 5.2. | Earth pressure on tank walls | ... | 261 |
| 5.3. | Uplift pressure on the floor of the tank | ... | 264 |
| 5.4. | Design of rectangular tank | ... | 264 |
| | Problems | ... | 278 |

PART II

PIPES, SILOS & CHIMNEYS

| | | | |
|---|---|-----|-----|
| CHAPTER 6. REINFORCED CONCRETE PIPES | | | |
| 6.1. | Loads on pipes | ... | 281 |
| 6.2 | Stresses due to hydrostatic pressure | ... | 282 |
| 6.3. | Stresses due to self weight | ... | 283 |
| 6.4. | Stresses due to weight of water inside | ... | 286 |
| 6.5 | Stresses due to earthfill over haunches | ... | 287 |
| 6.6. | Stresses due to uniformly distributed load on top | ... | 288 |
| 6.7. | Stresses due to uniform pressure from sides | ... | 288 |
| 6.8. | Stresses due to triangularly distributed load | ... | 289 |
| 6.9. | Stresses due to point load on crown | ... | 290 |
| 6.10. | Stresses due to over-burden and external loads | ... | 291 |
| | Problems | ... | 300 |
| CHAPTER 7. BUNKERS AND SILOS | | | |
| 7.1. | Introduction | ... | 301 |
| 7.2. | Janssen's theory | ... | 302 |
| 7.3. | Airy's theory | ... | 306 |
| 7.4. | Bunkers | ... | 311 |
| 7.5. | Hopper bottom | ... | 313 |
| 7.6. | Indian Standard on design of bins | ... | 316 |
| | Problems | ... | 340 |

CHAPTER 8. CHIMNEYS

| | | |
|---|-----|-----|
| 8.1. Introduction | ... | 341 |
| 8.2. Wind pressure | ... | 341 |
| 8.3. Stresses in chimney shaft due to self- weight and wind | ... | 342 |
| 8.4. Stresses in horizontal reinforcement due to wind shear | ... | 347 |
| 8.5. Stresses due to temperature difference | ... | 348 |
| 8.6. Combined effect of self load, wind and temperature | ... | 350 |
| 8.7. Temperature stresses in horizontal reinforcement | ... | 355 |
| 8.8. Design of R.C. chimney | ... | 356 |
| Problems | ... | 366 |

PART III CONCRETE FRAMES

CHAPTER 9. PORTAL FRAMES

| | | |
|---|-----|-----|
| 9.1. Introduction | ... | 369 |
| 9.2. Analysis of portal frames | ... | 370 |
| 9.3. Design of rectangular portal frame with vertical loads | ... | 370 |
| 9.4. Design of hinge at the base | ... | 385 |
| Problems | ... | 386 |

CHAPTER 10. BUILDING FRAMES

| | | |
|---|-----|-----|
| 10.1. Introduction | ... | 387 |
| 10.2. Substitute frames | ... | 388 |
| 10.3. Analysis for vertical loads | ... | 391 |
| 10.4. Methods of computing B.M. | ... | 394 |
| 10.5. Analysis of frames subjected to horizontal forces | ... | 407 |
| 10.6. Portal method | ... | 408 |
| 10.7. Cantilever method | ... | 410 |
| 10.8. Factor method | ... | 419 |
| Problems | ... | 433 |

PART IV CONCRETE BRIDGES

CHAPTER 11. AQUEDUCTS AND BOX CULVERTS

| | | |
|--------------------------------------|-----|-----|
| 11.1. Aqueducts and syphon aqueducts | ... | 437 |
| 11.2. Design of an aqueduct | ... | 438 |

| | | |
|--|-----|-----|
| 11.3. Box culvert | ... | 444 |
| 11.4. Design of box culvert | ... | 444 |
| Problems | ... | 442 |
| CHAPTER 12. CONCRETE BRIDGES | | |
| 12.1. Introduction : Various types of bridges | ... | 463 |
| 12.2. Selection of type of bridge and economic span length | ... | 467 |
| 12.3. Types of loads, forces and stresses | ... | 468 |
| 12.4. Live load | ... | 468 |
| 12.5. Impact effect | ... | 476 |
| 12.6. Wind load | ... | 478 |
| 12.7. Longitudinal forces | ... | 479 |
| 12.8. Lateral loads | ... | 481 |
| 12.9. Centrifugal force | ... | 481 |
| 12.10. Width of roadway and footway | ... | 482 |
| 12.11. General design requirements | ... | 482 |
| 12.12. Solid slab bridges | ... | 487 |
| 12.13. Deck girder bridges | ... | 505 |
| 12.14. B.M. in slab supported on four edges | ... | 507 |
| 12.15. Distribution of live loads on longitudinal beams | ... | 522 |
| 12.16. Method of distribution coefficients | ... | 524 |
| 12.17. Courbon's method | ... | 547 |
| 12.18. Design of a T-beam bridge | ... | 549 |
| 12.19. Balanced cantilever bridge | ... | 613 |
| Problems | ... | 657 |

PART V LIMIT STATE METHOD

| | | |
|---|-----|-----|
| CHAPTER 13. DESIGN CONCEPTS | | |
| 13.1. Methods of design | ... | 661 |
| 13.2. Safety and serviceability requirements (IS : 456-1978) | ... | 663 |
| 13.3. Characteristic and design values and partial safety factors | ... | 664 |
| Problems | ... | 666 |
| CHAPTER 14. SINGLY REINFORCED SECTIONS | | |
| 14.1. Limit state of collapse in flexure | ... | 667 |
| 14.2. Stress strain relationship for concrete | ... | 669 |
| 14.3. Stress-strain relationship for steel | ... | 669 |
| 14.4. Stress block parameters | ... | 672 |
| 14.5. Design stress block parameters (IS : 456-1978) | ... | 675 |

| | | |
|--|-----|-----|
| 14.6. Singly reinforced rectangular beams | ... | 677 |
| 14.7. Procedure for finding moment of resistance | ... | 679 |
| 14.8. Design of rectangular beam section | ... | 682 |
| Problems | ... | 692 |
| CHAPTERS 15. DOUBLY REINFORCED SECTIONS | | |
| 15.1. Necessity | ... | 693 |
| 15.2. Stress block and N.A. | ... | 693 |
| 15.3. Determination of moment of resistance | ... | 695 |
| 15.4. Design of a doubly reinforced section | ... | 697 |
| Problems | ... | 704 |
| CHAPTER 16. T AND L-BEAMS | | |
| 16.1. Introduction | ... | 705 |
| 16.2. Stress block and N.A. | ... | 706 |
| 16.3. Moment of resistance when $x_u < D_f$ | .. | 707 |
| 16.4. Moment of resistance when N.A. falls in the web | ... | 708 |
| 16.5. IS Code procedure for finding moment of resistance (IS : 456-1978) | ... | 714 |
| 16.6. Design of T-beam | ... | 717 |
| 16.7. Doubly reinforced T-beams | ... | 727 |
| Problems | ... | 738 |
| CHAPTER 17. SHEAR, BOND AND TORSION | | |
| 17.1. Limit state of collapse : Shear | ... | 739 |
| 17.2. Development length | ... | 746 |
| 17.3. Limit state of collapse : Torsion | ... | 74' |
| Problems | ... | 7. |
| CHAPTER 18. DESIGN OF BEAMS AND SLABS | | |
| 18.1. Design of beams | ... | 753 |
| 18.2. Design of cantilever | ... | 760 |
| 18.3. Design of doubly reinforced beam | ... | 764 |
| 18.4. Design of one way slab | ... | 769 |
| 18.5. Design of one way continuous slab | ... | 775 |
| 18.6. Design of T-beam roof | ... | 785 |
| Problems | ... | 785 |
| CHAPTER 19. AXIALLY LOADED COLUMNS | | |
| 19.1. Limit state of collapse : Compression | ... | 787 |
| 19.2. Short columns | ... | 789 |
| 19.3. Short axially loaded members in axial compression | ... | 789 |
| 19.4. Short axially loaded columns with minimum eccentricity | ... | 790 |
| 19.5. Design charts | ... | 791 |

| | |
|---|-----|
| 19.6. Compression members with helical reinforcement ... | 794 |
| 19.7. Design specifications (IS : 456-1978) ... | 794 |
| Problems ... | 806 |
| CHAPTER 20. COLUMNS WITH UNIAXIAL AND BIAXIAL BENDING | |
| 20.1. Introduction ... | 807 |
| 20.2. Combined axial load and uniaxial bending ... | 807 |
| 20.3. Construction of interaction curves for column design ... | 810 |
| 20.4. Short columns subjected to axial load and biaxial bending ... | 829 |
| Problems ... | 835 |
| CHAPTER 21. DESIGN OF STAIR CASES | |
| 21.1. General notes on design of stairs ... | 837 |
| 21.2. Design of stairs spanning horizontally ... | 841 |
| 21.3. Design of dog-legged stair ... | 843 |
| 21.4. Design of stairs with quarter space landing ... | 846 |
| Problems ... | 850 |
| CHAPTER 22. TWO-WAY SLABS | |
| 22.1. Introduction ... | 851 |
| 22.2. Simply supported slab with corners free to lift (I.S. Code method). ... | 852 |
| 22.3. Restrained slabs (I.S. Code method) ... | 859 |
| Problems ... | 868 |
| CHAPTER 23. CIRCULAR SLABS | |
| 23.1. Introduction ... | 869 |
| 23.2. Slab freely supported at edges and carrying U.D.L. ... | 870 |
| 23.3. Slabs fixed at edges and carrying U.D.L. ... | 871 |
| 23.4. Slab simply supported at the edges with load w uniformly distributed along the circumference of a concentric circle ... | 872 |
| 23.5. Slab simply supported at edges, with U.D.L. inside a concentric circle ... | 873 |
| Problems ... | 882 |
| CHAPTER 24. YIELD LINE THEORY AND DESIGN OF SLABS | |
| 24.1. Introduction ... | 883 |
| 24.2. Yield line patterns ... | 884 |
| 24.3. Moment capacity along an yield line ... | 888 |
| 24.4. Ultimate load on slabs ... | 889 |
| 24.5. Analysis by virtual work method ... | 890 |
| 24.6. Analysis by equilibrium method ... | 902 |
| Problems ... | 913 |

CHAPTER 25. FOUNDATIONS

| | | |
|--|-----|-----|
| 25.1. Indian Standard Code Recommendations for design of footings (IS: 456-1978) | ... | 915 |
| 25.2. Isolated footing of uniform depth | ... | 920 |
| 25.3. Isolated sloped footing | ... | 925 |
| Problems | ... | 929 |

**PART VI
PRESTRESSED CONCRETE &
MISCELLANEOUS TOPICS**

CHAPTER 26. PRESTRESSED CONCRETE

| | | |
|--|-----|------|
| 26.1. Introduction | ... | 933 |
| 26.2. Basic concepts | ... | 935 |
| 26.3. Classification and types of prestressing | ... | 952 |
| 26.4. prestressing systems : End anchorages | ... | 956 |
| 26.5. Losses of prestress | ... | 971 |
| 26.6. Computation of elongation of tendons | ... | 984 |
| 26.7. Properties of materials | ... | 995 |
| 26.8. Merits and demerits of prestressed concrete | ... | 1002 |
| 26.9. Basic assumptions | ... | 1003 |
| 26.10. Analysis of beams for flexure | ... | 1003 |
| 26.11. Kern distances and efficiency of section | ... | 1009 |
| 26.12. Design of sections for flexure : Magnel's method | ... | 1015 |
| 26.13. Rectangular section | ... | 1025 |
| 26.14. I-Section | ... | 1029 |
| 26.15. Alternative design procedure | ... | 1044 |
| 26.16. Shear and diagonal tension | ... | 1050 |
| 26.17. Stresses at anchorage | ... | 1055 |
| 26.18. Indian Standard Code recommendations (IS : 1343-1980) | ... | 1060 |
| 26.19. Procedure for limit state design | ... | 1084 |
| Problems | ... | 1101 |

CHAPTER 27. SHRINKAGE AND CREEP

| | | |
|---|-----|------|
| 27.1. Introduction | ... | 1103 |
| 27.2. Shrinkage of concrete | ... | 1103 |
| 27.3. Shrinkage stresses in symmetrically reinforced sections | ... | 1107 |
| 27.4. Shrinkage stresses in singly reinforced beams | ... | 1109 |
| 27.5. Instantaneous and repeated loading on c | ... | 1112 |
| 27.6. Sustained loading : Creep | ... | 1114 |
